Chapter 1-Introduction

The To-Do List Web Application is a browser-based task management system developed using HTML, CSS, and JavaScript. The purpose of this project is to help users efficiently manage their daily tasks by allowing them to add, edit, delete, and mark tasks as completed.

The application also includes additional features such as setting a due date and assigning priority levels (Low, Medium, High) to tasks. All data is stored in the browser using Local Storage, ensuring that tasks remain saved even after refreshing or reopening the page.

This project demonstrates practical implementation of DOM manipulation, event handling, and client-side data storage.

Chapter 2-Objective of the Project

The main objectives of this project were:

- To build an interactive web-based task management system
- To implement CRUD operations (Create, Read, Update, Delete)
- To understand DOM manipulation in JavaScript
- To implement browser Local Storage for data persistence
- To design a clean and responsive user interface

Chapter 3- Technologies Used

3.1 HTML

Used to create the structure of the application including:

- Input fields
- Date selector
- Priority dropdown
- Task list container

3.2 CSS

Used for:

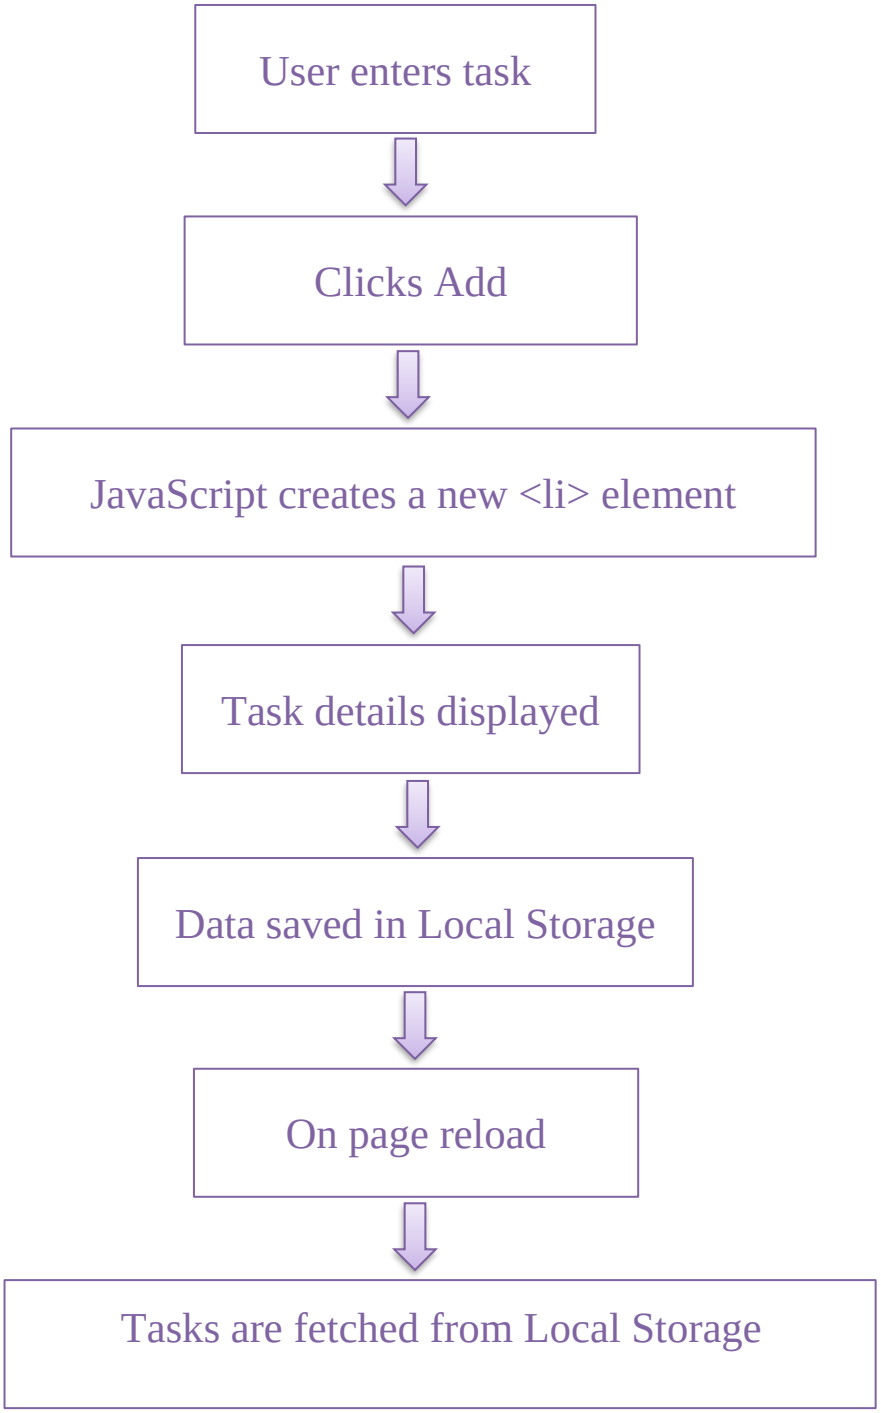
- Styling the application
- Creating a responsive layout
- Designing buttons and task elements
- Applying gradient background and modern UI

3.3 JavaScript

Used for:

- Adding tasks dynamically
- Editing tasks
- Deleting tasks
- Marking tasks as completed
- Saving and retrieving data from Local Storage

Chapter 4- System Architecture / Working Flow



Chapter 5- Features of the Application

1. Add New Task
2. Assign Due Date
3. Set Priority Level
4. Edit Existing Task
5. Delete Task
6. Mark Task as Completed
7. Persistent Storage using Local Storage

Chapter 6- Code Explanation

6.1 addTask() Function

- Checks if input is empty
- Creates a new <li> element
- Adds task content dynamically
- Adds delete and edit buttons
- Saves data using saveData()

6.2 Event Listener

- Used to:
- Mark task as completed
- Delete task when clicking ✕

6.3 saveData() Function

- Stores list container HTML into Local Storage:

```javascript
localStorage.setItem("data", listContainer.innerHTML);
```

Chapter 8- Challenges Faced

During development, I faced several challenges:

- Handling dynamic DOM elements
- Managing edit functionality
- Maintaining proper UI alignment
- Understanding local storage behavior
- These challenges helped improve my JavaScript and debugging skills.

Chapter 9- Learning Outcomes

- Practical understanding of DOM manipulation
- Working with Local Storage
- Implementing CRUD operations
- Improving UI design skills
- Debugging and improving code structure

Chapter 10- Conclusion

The To-Do List Web Application project enhanced my understanding of front-end development concepts. It provided hands-on experience in building a functional and interactive web application using core web technologies. The project strengthened my JavaScript fundamentals and improved my problem-solving abilities.
